WHO WE ARE

Vivid Vision started in 2013 and is based in San Francisco, CA. We create software using customized hardware to help clinicians treat their patients with binocular vision disorders, such as amblyopia, strabismus, and convergence insufficiency.

WHAT WE DO

The Vivid Vision Suite includes a complete virtual reality system. The system allows clinicians to treat amblyopia and strabismus by using activities specifically for anti-suppression, stereo acuity, visual acuity, and more.
